INTRODUCTION

We are delighted to announce the launching of the first issue of Attahadi Medical Journal (AMJ). We are even more thrilled to have you on board as readers, writers, and reviewers. AMJ publishes original research papers, reviews, short communications, case reports, and editorials on dental and medical research, as well as clinical practices.

AMJ envisions this journal as a platform for all physicians and researchers in Libya and around the world to contribute scientific data and reports on all aspects of medical research. We are well aware of the duties that come with the editor's position, and we are excited to take on this new challenge. By selecting high-quality articles, we hope to increase AMJ's readability and visibility in the international research community.

Peer review remains an important part of how we evaluate submitted manuscripts. We've assembled an esteemed group of Editorial Board Members who will ensure timely evaluation of all submissions and uphold the highest standards of quality and scientific rigor, while allowing studies from either community to be published equally. Other goals of interest include shortening the time between acceptance and publication and raising the journal's rating. The editorial board will focus on increasing journal visibility by first subscribing to Crossref and obtaining a digital objective identifier (doi) for each article submitted to AMJ.

The "impact factor" has sparked a great deal of interest. However, journals must prove their worth in the first few years before being included in the "Science Citations Index" and assigned an official impact factor. There are now numerous indexing and archiving systems for medical publications. Indeed, indexing as many systems as possible improves the visibility of articles published in the journal. Although indexation in Index Medicus and associated indices remains our primary goal, we are currently working to have AMJ listed in DOAJ, EBSCO, Google Scholar, and, in the future, Web of Science.

We also encourage you to use the free submission and publication process, as well as the Open Journal Systems (OJS) - Public Knowledge Project resources, such as plagiarism and reference checkers [1,2]. Open access achieves the ultimate goal of "distributing and sharing scholarly information" in this way. According to reports, free online papers are becoming more popular. The vast majority of commercial open access is funded by writers. We anticipate that AMJ will become one of the most prestigious medical journals, and we eagerly await your research contributions. We wish you all the best for the year 2024 and beyond.
